

# CS571 Spring 2025 – ICA G

## Prototyping

Please *make a copy* of this document by clicking **File > Make a copy**. You may share and co-edit it with your fellow group members.

---

In this in-class activity, you will explore the concept of **Prototyping** in two steps:

1. Develop a Low-Fidelity Prototype
2. Develop a High-Fidelity Prototype

Areas needing your response are clearly marked with **Your Turn!** Be sure to complete all aspects of the assignment. Your Canvas submission will be a **pdf** version of this document.

You may complete this in groups of 1, 2, or 3 people! :) Please be sure to assign yourself and your team member(s) to a group.

Please log in with your wisc email and verify education status!

# 1. Develop a Low-Fidelity Prototype

First, review the HW7 Demo by visiting Canvas > Kaltura Gallery > HW7 Demo. Then, develop a low-fidelity prototype of Badger Mart!

**Your Turn!** Develop a *low-fidelity* prototype of Badger Mart! This does not need to have the exact same behavior as the demo video, but should provide functionality to...

- To view available products.
- To add and remove products from their basket.
- To submit an order

Remember, this is a *low-fidelity* prototype. Focus on the structure and navigation – not on the small details – of the design.

Please paste **representative screenshot(s)** of your Figma design below and *annotate* anything that needs further clarification.

## 2. Develop a High-Fidelity Prototype

After committing to the premise set in your low-fidelity prototype, it is time to increase the fidelity! Improve upon your existing prototype by developing a high-fidelity prototype.

**Your Turn!** Improve upon your existing prototype by turning it into a high-fidelity prototype. This improved prototype should put more thoughtful consideration into the use of visual design principles, such as color, type, and imagery. [You can find the exact images used here.](#)

Your high-fidelity prototype should show your idea as it would appear on the app store. Again, this does not have to be how it appears in HW7! Feel free to be expressive with your creativity.

Please paste **representative screenshot(s)** of your Figma design below and *annotate* anything that needs further clarification.

After completing this document, please be sure to upload it as a PDF in Canvas!
