

CS571 Spring 2025 – ICA F

Accessibility

Please *make a copy* of this document by clicking **File > Make a copy**. You may share and co-edit it with your fellow group members.

In this in-class activity, you will explore the concept of **Accessibility** in three steps:

1. Perform an Accessibility Audit on a Website
2. Perform an Accessibility Audit on Your Prototype!
3. Use Assistive Technology in Your Device

Areas needing your response are clearly marked with **Your Turn!** Be sure to complete all aspects of the assignment. Your Canvas submission will be a **pdf** version of this document.

You may complete this in groups of 1, 2, or 3 people! :) Please be sure to assign yourself and your team member(s) to a group.

1. Perform an Accessibility Audit of a Website

Having learned about accessible design, you will now perform an audit of a website of your choosing.

Your Turn! As a team, choose a website that you will perform an accessibility audit on and answer the following questions...

- a. What is the website that you will be analyzing? Please paste a link below.

- b. **For each team member,** make a copy of and complete the following table. You may use any accessibility tool (such as [AXE](#) or [Wave](#)) or manual inspection to identify accessibility issues.

i. What is the <i>specific page</i> that you are analyzing? Paste a link and screenshot below.
ii. What were your findings? Were there issues with insufficient color contrast, skipped heading levels, missing alternative text, unlabelled input fields, or anything else?
iii. What could be done to improve the accessibility of your design? Describe any practical solutions that could be implemented.

2. Perform an Accessibility Audit on Your Prototype

Now, you will engage in an accessibility audit of *your* prototype from ICA-D!

Your Turn! Open the Figma prototype you created in ICA-D (regarding the Madison Cat Project). If you changed group member(s) between ICAs, choose any of your Figma prototypes. Perform an accessibility audit answering the following questions...

- a. Please paste a public link to your Figma prototype below as well as a screenshot of the overview of all the screens.

- b. Using [Stark](#) (a plugin for checking accessibility) *or* manual inspection, identify potential accessibility issues in your Figma design. Paste a screenshot of your design, annotating any accessibility issues that you have found.

- c. What could be done to improve the accessibility of your design? Describe any practical solutions that could be implemented.

3. Use Assistive Technology in Your Device

Finally, you will use the assistive technology built right into your mobile device!

Your Turn! Answer the questions below after performing some task on one of your mobile devices using VoiceOver (iOS) or TalkBack (Android).

- a. What was the task that you attempted? **Tip:** Don't attempt anything too personal! Your device will read out what is on your screen.
- b. Were you able to successfully complete the task?
- c. What were some issues or frustrations that you ran into along the way?

After completing this document, please be sure to upload it as a PDF in Canvas!
